

Wudu Basin

The Wudu Basin is an innovative one piece washing basin, ideal for domestic and commercial environments including mosques, multi-faith rooms and work places.

It is designed for easy installation into various settings, including offices, schools, hospitals, prisons, and public buildings. The Wudu Basin is also suitable for larger home spaces and comes with water and waste connections adaptable for different architectural requirements.

A principle and unique feature of the Wudu Basin is its geometric design which allows side by side installation to create a seamless row for communal washing areas. It is designed to minimise water splashing to protect clothing and surrounding areas as well as an ergonomic shape that allows you to perform your ablution with ease and comfort.

The Wudu Basin is an innovative washing basin, ideal for domestic and commercial environments.

High flow taps for precise water direction, avoiding unnecessary splashing

Seamless modular design to fit basins side-by-side.

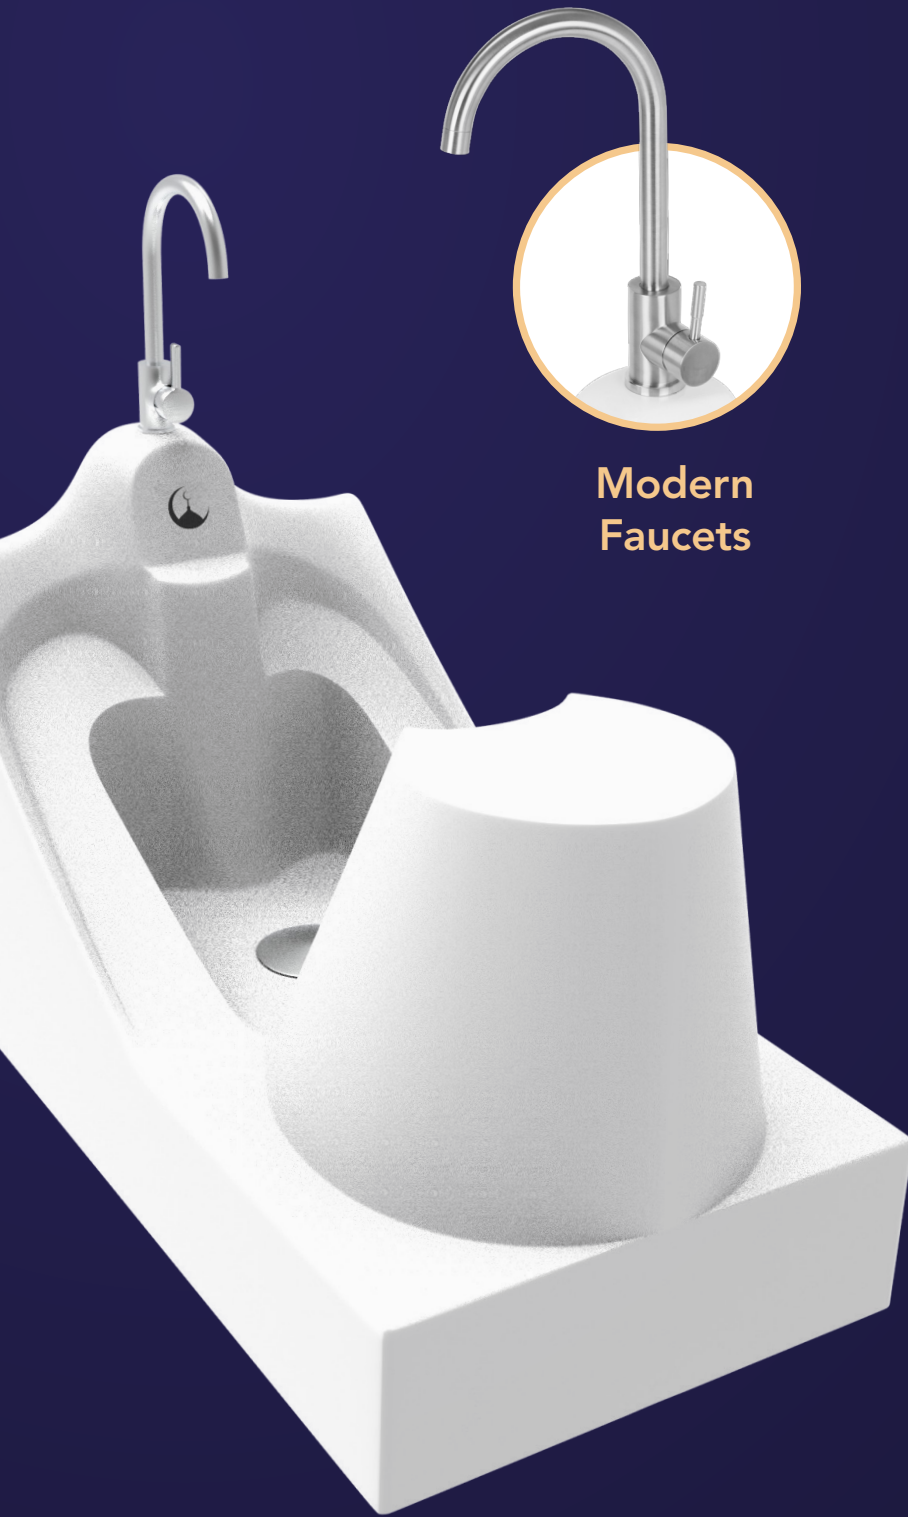

Discreet drainage with quick and easy maintenance

A fully integrated, one-piece design to remain hygienic, and hassle-free. Minimising maintenance, reducing long-term costs, and eliminating the risk of loose or broken parts.

Additional room around the seat aids interconnectivity, allowing two people to have ample space between them, for better comfort and allowing a larger area for the footrest.

**Modern
Faucets**

Purpose-built for Wudu

Designed to support the full ritual with minimal discomfort or mess.

Ergonomic Foot Basin

Easy to reach and wash feet without strain or imbalance.

Hygienic Materials

Made from anti-bacterial, easy-to-clean surfaces.
